🔍 WHAT YOU BUILT (GOOD ✅)

From your screenshots:

✅ Discover Flow (NOW GOOD)

- Click → Detail page ✅
- Detail → Start → Countdown → Session ✅
- Exercise list visible ✅
- Navigation works ✅

👉 This part is now **REAL APP behavior**

❌ MAIN PROBLEM (TRAINING TAB)

From your 7th & 8th images:

Current Training UI:

- Just filters (Full Body, Chest, etc.)
- Shows preview text
- No navigation ❌
- No structured selection ❌
- No visual cards ❌

👉 This is why it still feels **scripted + weak**

🧠 WHAT YOU WANT (REFERENCE IMAGES)

From your last images (very important):

🔥 TARGET UX (LIKE REAL FITNESS APPS)

Step 1:

User opens Training

👇 sees cards:

- Full Body
- Chest
- Arms
- Legs
- Back
- Abs

👉 ALL WITH REAL IMAGES

Step 2:

User clicks "Chest"

👇 navigate to:

- Chest Beginner
- Chest Intermediate
- Chest Advanced

👉 each as a **card with image**

Step 3:

User clicks "Chest Beginner"

👇 navigate to:

- Home (Freehand)
- Gym (Equipment)

Step 4:

User clicks → Workout list

👇 shows:

- Chest Workout 1
- Chest Workout 2

- etc.

Step 5:

Start workout → session (already built by you ✅)

⚠️ **ROOT ISSUE**

Right now your Training tab is:

👉 **STATE-BASED UI (filters only)**

But what you need is:

👉 **NAVIGATION-BASED FLOW (multi-screen hierarchy)**

🔥 **FINAL ARCHITECTURE YOU NEED**

Training

↓

Body Part Screen

↓

Level Screen

↓

Mode Screen (Home/Gym)

↓

Workout List

↓

Workout Detail

↓

Session

🚀 **REPLIT AI PROMPT (TRAINING SYSTEM FIX)**

Use this EXACT 👇

📜 **PROMPT**

Act as a senior React Native + Next.js engineer.

Upgrade the Training tab into a full navigation-based workout selection system like real fitness apps.

CURRENT PROBLEM:

The Training screen currently uses filter buttons (Full Body, Chest, etc.) but does NOT navigate anywhere.

It feels static and not interactive.

GOAL:

Convert Training into a multi-step navigation flow with cards and real images.

IMPLEMENT THIS FLOW:

---

1. TRAINING HOME SCREEN

Replace filter UI with CARD GRID:

Each card:

- Full Body
- Chest
- Arms
- Legs
- Back
- Abs

Each card must have:

- realistic fitness image
- title
- short subtitle

On click:

→ navigate to /training/body/[bodyPart]

---

2. BODY PART SCREEN

Example: /training/body/chest

Show 3 CARDS:

- Beginner

- Intermediate

- Advanced

Each card must have:

- image (real human fitness photo)

- duration (e.g., 10 min)

- number of exercises

On click:

→ navigate to /training/level/[bodyPart]/[level]

---

3. LEVEL SCREEN

Example: chest + beginner

Show 2 CARDS:

- Home (Freehand)

- Gym (Equipment)

Each card:

- icon or image

- short description

On click:

→ navigate to /training/mode/[bodyPart]/[level]/[mode]

---

4. WORKOUT LIST SCREEN

Show list of workouts as CARDS:

Each card:

- title
- duration
- exercises count
- calories estimate
- image

On click:

→ navigate to /workout/[id]

---

5. CONNECT TO EXISTING SYSTEM

- Use your existing workout detail screen
- Use your existing session + countdown system

---

6. IMAGE REQUIREMENTS

Use realistic fitness images:

- chest workout → chest bodybuilder image
- legs → squat image
- abs → core workout image

Use free sources or placeholders:

- unsplash
- pexels

---

7. OPTIONAL UX IMPROVEMENTS

- Add smooth transitions between screens
- Add loading skeleton
- Add back navigation

GOAL RESULT:

Training should feel like:

Nike Training App / Home Workout App

NOT like filters.

It must be:

Clickable → Navigable → Structured → Visual → Real

💥 **FINAL TRUTH**

👉 Your Discover = **engine built** ✅
👉 Your Training = **just UI** ❌

🧠 **BIG INSIGHT**

You are currently mixing:

- ❌ Filtering UI
- ✅ Navigation UX

👉 You MUST commit to:

🔥 **Navigation-first architecture**
