🔴 **ISSUE 1: BLACK SCREEN + 0 WORKOUT**

🧠 **ROOT CAUSE (very important)**

From your screenshots:

- Countdown screen shows:
- 0 exercises • Home • Beginner
- Then → black screen
- Then → summary shows **0 kcal, 0 reps, 0 time**

👉 This means:

❌ **Your workout session is NOT receiving data**

💥 **EXACT PROBLEM**

Somewhere you are doing:

```
router.push('/session')
```

Instead of:

```
router.push(`/session?workoutId=${id}`)
```

OR

You are not passing:

```
{
  exercises: [],
}
```

So session screen gets:

undefined / empty array

🧠 **WHY BLACK SCREEN?**

Your session logic probably does:

```
if (!currentExercise) return null;
```

👉 So nothing renders → BLACK SCREEN

✅ WHAT SHOULD HAPPEN

Flow should be:

Training → Select Workout → Select Level → Select Mode

→ Start Workout

→ Countdown

→ Session (with exercises)

→ Summary (real data)

🔴 ISSUE 2: FLOATING AI BUTTON OVERLAPPING SETTINGS

🧠 ROOT CAUSE

- FAB (floating chatbot) is **fixed position**
- Bottom navigation also fixed
- No safe spacing

👉 So FAB overlaps Settings icon

✅ FIX APPROACH

You need:

bottom: 80px;

OR dynamic safe-area handling:

bottom: insets.bottom + 70

🚀 FINAL REPLIT FIX PROMPT (VERY IMPORTANT)

Paste this EXACTLY 👇

📜 PROMPT

Act as a senior full-stack React Native + Next.js engineer.

Fix TWO CRITICAL PRODUCTION BUGS in my fitness app:

BUG 1: WORKOUT SESSION SHOWS BLACK SCREEN + 0 DATA

PROBLEM:

- When user starts a workout:
  → Countdown shows "0 exercises"
  → Then session screen is blank (black screen)
  → Summary shows all values = 0

ROOT CAUSE:

Workout data is NOT being passed to session screen.

FIX REQUIREMENTS:

---

1. PASS WORKOUT DATA CORRECTLY

When user clicks "Start Workout":

Instead of:

```
router.push('/session')
```

Use:

```
router.push({
  pathname: '/session',
  params: {
    workoutId,
    exercises,
    duration,
    level,
    mode
  }
})
```

---

2. SESSION SCREEN FIX

- Read params using router/searchParams
- Validate exercises array

Example:

```
if (!exercises || exercises.length === 0) {
  show fallback UI:
  "No exercises found"
}
```

---

3. FIX EXERCISE FLOW

- Ensure first exercise loads correctly
- Ensure timer starts
- Ensure index increments

Example:

```
const [currentIndex, setCurrentIndex] = useState(0);
```

---

4. FIX SUMMARY DATA TRACKING

Track:

- calories
- reps
- duration

Ensure values update during session and are passed to summary screen.

---

5. REMOVE BLACK SCREEN

Instead of returning null:

Show loading or fallback UI.

BUG 2: FLOATING AI BUTTON OVERLAPS NAVBAR

PROBLEM:

Floating chatbot button overlaps bottom navigation (Settings icon).

FIX REQUIREMENTS:

---

1. ADD SAFE BOTTOM SPACING

Update FAB style:

position: absolute;

bottom: 80px;

right: 20px;

---

2. HANDLE MOBILE SAFE AREA

If using React Native:

Use:

```
import { useSafeAreaInsets } from 'react-native-safe-area-context';

const insets = useSafeAreaInsets();

bottom: insets.bottom + 70
```

---

3. OPTIONAL UX IMPROVEMENT

- Hide FAB during workout session
- Or reduce opacity

---

4. ENSURE FAB NEVER BLOCKS:

- bottom nav
- CTA buttons
- important UI

FINAL RESULT:

✓ Workout session loads correctly

✓ Exercises execute properly

✓ Summary shows real stats

✓ No black screen

✓ Floating button does NOT overlap UI

✓ App feels production-ready

IMPORTANT:

Do NOT change UI design.

Only fix logic, navigation, and positioning.

🔥 **BONUS (WHY THIS HAPPENED)**

You're at a stage where:

👉 UI = done
👉 Logic = broken

This is **normal in real startups**
